48 Claude answers to 24 buyer questions in 3 EU niches: who gets linked

We asked Claude 24 questions a buyer would ask about beauty and collagen supplements, food supplements and mattresses in France, twice each. Runs: 19 Oct 2026. Claude with web search on. One engine only.

FINDINGS

- The most-linked shop appears in 19% to 25% of a cell's answers; the top three shops take 17% to 32% of shop links.
- Two runs of the same question share only 32% to 54% of the shop sites they link, on average per cell.
- Links go to shops' own sites: 127 of 242 links.
- Claude linked 2 domains with no working page, 2 times in total, in 1 of 3 cells.

METHOD AND LIMITS

A shop counts as linked when its domain is among the answer's links; names in running text are not counted. Every answer is stored with a timestamp. One engine (Claude, web search on), 48 answers: read percentages as counts, not market share. These answers differ from what a signed-in person sees, and other assistants may link different shops. Domains are as Claude linked them; we checked which ones load on 18 and 19 Oct 2026. No causes are claimed. Licence: CC BY 4.0, credit CitedBy with a link.
